# ***Regulatory Compliance Information***

**CE mark.** Declaring compliance to all the applicable European Union (EU) directives. For CE mark related questions:

exone GmbH, Bruehlstrasse 22, 89537  
Giengen-Sachsenhausen

In the European Union, this symbol indicates that this product including battery must not be disposed of with household waste. It is your responsibility to hand it over to a designated collection point for the recycling of waste electrical and electronic equipment. For more information, please contact your local waste collection center or the point of purchase of this product.

## ***Safety Precautions***

The following are lists of precautionary measures that users must understand before using this computer:

1. Do not place near the fire or other sources of heat.
2. Do not expose to magnetic fields.
3. Do not expose to direct sunlight.
4. Do not expose to rain or moisture.
5. Do not place heavy objects to add heavy pressure on the computer.
6. Do not drop the computer.

## ***CAUTION***

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

## ***ATTENTION***

RISQUE D'EXPLOSION SI LA BATTERIE EST REMPLACÉE PAR UN TYPE INCORRECT. RECYCLEZ LES BATTERIES USAGÉES SELON LES INSTRUCTIONS.

IT IS RECOMMENDED TO USE THIS COMPUTER IN AN ENVIRONMENT WHERE THE AMBIENT TEMPERATURE IS NO MORE THAN 35°C.

# 1. Getting to know your computer

## Package contents

Carefully unpack your box and take out the items listed as below. If any of the items is missing or damaged, contact your dealer immediately:

<b>Convertible</b>	<b>AC adapter and power cable</b>
	
<b>Stylus</b>	<b>Information sheet for the manual and MSDS</b>
	

## Layout

### Front

No.	Name	Function
1	Rotatable camera	Often for taking self-portraits as well as for video conferencing.
2	Microphone	Mainly for sound and speech recording
3	Touchscreen	The main display of your laptop and a see-touch device. You can look at it and also touch it with your fingers to control it.
4	Power button	Press it to power on/off your laptop.
5	Power indicator	Shows the power status of your laptop.
6	Stylus holder	You can rest the stylus here.
7	Touchpad	Allows you to control your system using figure gestures

## **Bottom**

No.	Name	Function
1	Handle	This integrated rubber handle allowing you to carry your notebook easily and handily.
2	Speaker	The sound system has two speakers for playing music, notification sounds, and other audio data.

## Right

No.	Name	Function
1	Rubber cover	Pull and flip it up to access the I/O interface
2	Kensington lock	Allows you to secure the notebook with a Kensington lock.
3	SIM card slot nano type (optional)	Insert your SIM card slot here to acquire the mobile connection.
4	USB 2.0 Type-A port	Plug your USB Type-A devices here.
5	RJ45	Plug the RJ45 cable to connect to a wired network environment.

## Left

No.	Name	Function
1.	Rubber cover	Pull and flip it up to access the I/O interface
2	USB Type-C port	Plug your USB Type-C supported devices here. Plug the provided adapter here to charge the battery.
3.	HDMI	Plug your HDMI supported device here.
4	USB 3.0 Type-A port	Plug your USB Type-A devices here.
5	Combo Audio jack for microphone/headphone	Plug your 3.5mm headphone here
6	Micro SD card slot	Plug your micro SD card here

### Back of the LCD panel

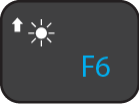

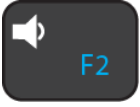

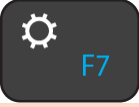

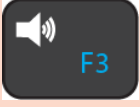

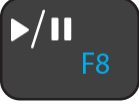

No.	Name	Function
1	System indicator	Shows the system status.
2	Wi-Fi indicator	Shows your Wi-Fi connection status.

## Function keys

The following function keys are no need to press Fn to make them work.

	Mute or unmute your system.		Increases the display brightness.
	Decreases the volume level.		Opens the Settings screen.
	Increases the volume level		Play or Pause
	Switches display output between your display, external monitor (if connected) and both.		Push here to talk to Cortana, if available.
	Decreases the display brightness		

## Folding the keyboard

This laptop supports a swiveling 11.6-inch touchscreen that can be used in several different ways. Opening the device as a standard laptop gives you access to the keyboard and touchpad, while folding the keyboard behind the screen turns it into a laptop. You also can prop the notebook's screen up in stand mode, which is ideal for viewing videos and presentations.

## Your rotatable camera

Form the angle at which the camera facing forward, you can adjust the camera angle downward to make it facing down at an angle of 35 degree.

Or, you can turn it over a full 200 degree to use it like a rear-facing camera.

## Stylus pen battery replacement

1. Unscrew the end part of the stylus.

2. Replace the AAAA battery with the positive (+) end of the battery pointing toward the writing tip.

3. Screw the end back on.

## 2. Using your computer

### Powering ON/OFF

#### Powering on your computer

1. If this is the first time you turn this computer on, connect the AC adapter and fully charge the battery.
2. Press the power button (normally 1 to 2 seconds). You shall see the screen turning on.

#### Powering on for the first time

The laptop will require you to do the initial setup, which including:

- Activate your Windows 10

- Sign in to or create your Microsoft account
- Setup a wireless connection and more

Please follow the instruction to complete the initial setup.

## **Powering off your laptop**

Save all your data before powering your laptop off.

To power off your system, following the steps below:

### A. By Start menu

1. Click the Windows icon in the low-left corner of the Desktop.

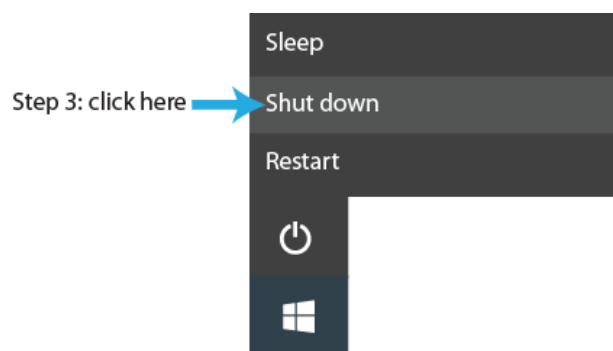

Or, press on the Windows key in the keyboard

2. In the Start menu, click <Power> option, as shown on the right,

3. Select <Shut down> from the power option menu, as shown on the right.

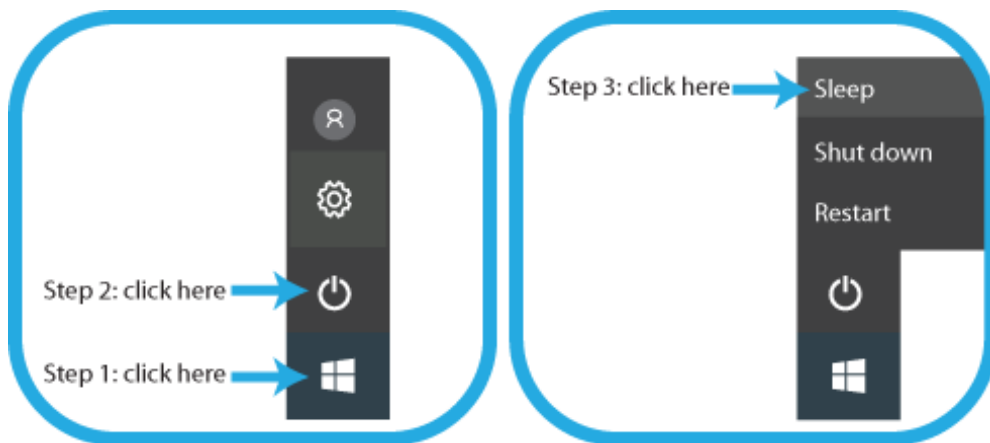

## Putting your laptop into sleep mode

When you will be away from your laptop for a short time, put the laptop to sleep.

Do one of the following:

- Close the display panel
- Press the power button briefly one time.
- Open the Start menu and then select <Power> → <Sleep>.

## Waking up your laptop

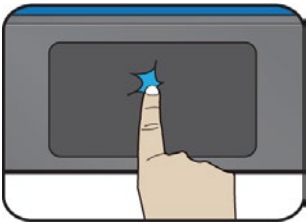

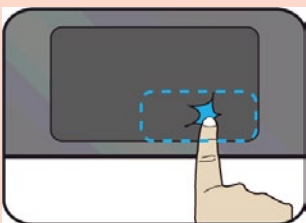

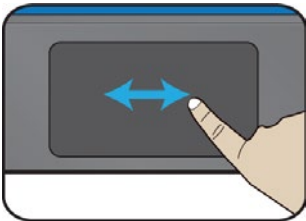

Just pressing the power button briefly one time.

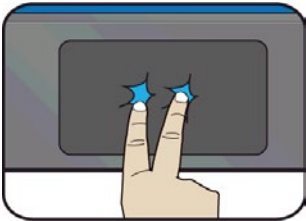

## Basic touchpad operations

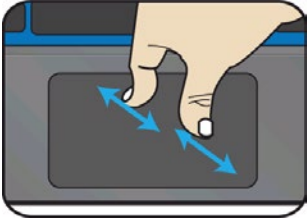

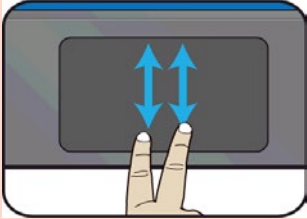

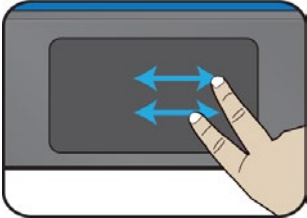

The touchpad works like a traditional mouse. With it, you can move the cursor and perform left-click, right-click, double-click actions. However, the actual available actions are application dependent.

### One finger

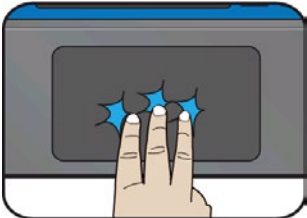

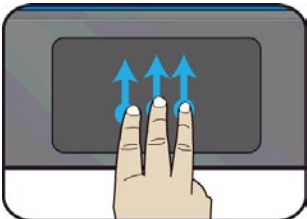

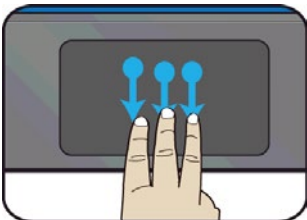

Action	Explanation
	Tap once on the touchpad surface or press once on the low-left corner of the touchpad to get the effect just like left clicking a mouse.
	Press once on the low-right corner of the touchpad to get the effect just like right clicking a mouse.
	Press and continue to hold down the left corner and then move (drag) your finger across the touchpad surface to drag an item on the desktop.

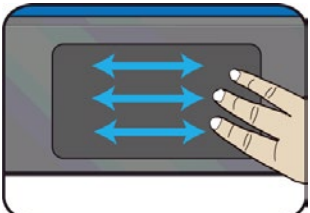

### Two fingers

Action	Explanation
	Tap once on the touchpad surface to get the effect just like right clicking a mouse

	Move two fingers together or apart while touching the screen. This is to zoom in and out on visual apps, such as pictures and maps.
	Drag two fingers vertically the touchpad to scroll vertically.
	Drag two fingers horizontally on the touchpad to scroll horizontally.

### **Three fingers**

Action	Explanation
	Clicking with three fingers can open the Cortana app.
	Press and drag upward with three fingers to bring existing active windows out on the desktop.
	Press and drag downward with three fingers to hide all existing active windows and bring out the desktop.

	<p>Press and drag to left or right with three fingers to switch between existing active windows.</p>
---	--

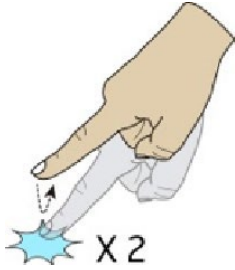

### **Four fingers**

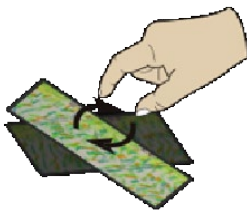

Action	Explanation
	<p>Clicking with four fingers can open the Action Center.</p>

## Basic touchscreen operations

Your system is ideal for you to use your fingers or the stylus pen to perform many actions on it.

- Don't use sharp objects to touch the screen. Or, the screen may be damaged or scratched.
- Don't touch the touchscreen with a conductive material. It may cause a malfunction.
- The supporting functions are application dependent.

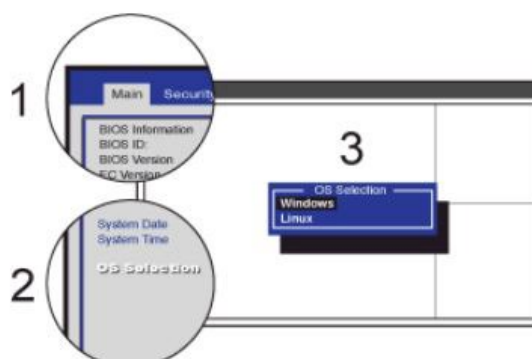

Gesture name	Explanation
<p>Tap</p> 	<p>Touch once on an item to start an app, open a link, or perform an optional function. This is similar to a left-click with a mouse.</p>
<p>Double-tap</p> 	<p>Slightly press twice with your finger to select an item.</p>
<p>Press and hold</p> 	<p>Press and leave your finger on an item. This brings up detailed information or opens a menu with more options for the item. This is similar to a right-click with a mouse.</p>

<p>Pinch</p>  <p>or</p>	<p>Move two fingers together or apart while touching the screen. This is to zoom in and out on visual apps, such as pictures and maps.</p>
<p>Rotate</p> 	<p>Place two or more fingers on an item and then turn your hand.</p> <p>This enables you to turn an object. (Note: Not all items can be rotated, depending upon the app.)</p>
<p>Slide</p> 	<p>Drag your finger across the screen.</p> <p>This can scroll through lists and pages, and can also move an object or be used to draw or write, depending upon your apps.</p>

## Linux supporting (only on request)

You laptop supports Windows and Linux and you can choose which one to install in the BIOS setup menu. To make the operating system selection, you need to:

1. Open the BIOS Main menu.
2. Find and click [OS Selection].
3. In the popup menu, select your OS to be installed.

Depending on which OS you have installed, you will need to set following two features accordingly in your BIOS setup menu to get your operating system booting properly.

Feature name	Windows 8.x/10	Linux
8254 Clock Gating	Enabled	Disabled
CPU Monitor MWAIT	Enabled	Disabled

**Note:** Your Linux will not boot if these two features are enabled.

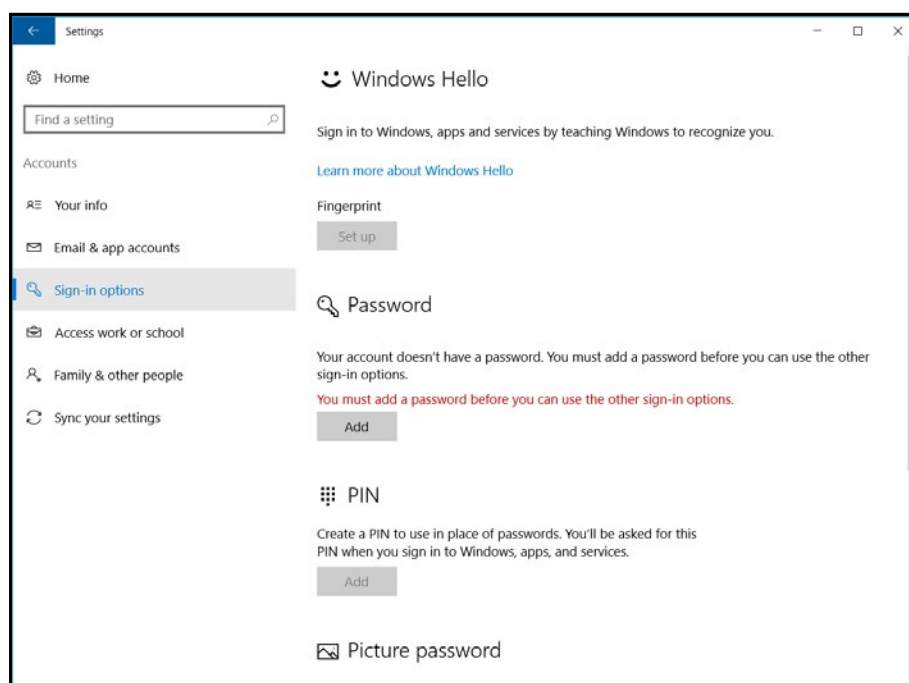

## Fingerprint login (optional)

If your system comes with the fingerprint login feature, you can follow the following steps to activate this feature:

1. Open the Settings page and select Accounts.

For how to open the Settings page, please refer to page 27.

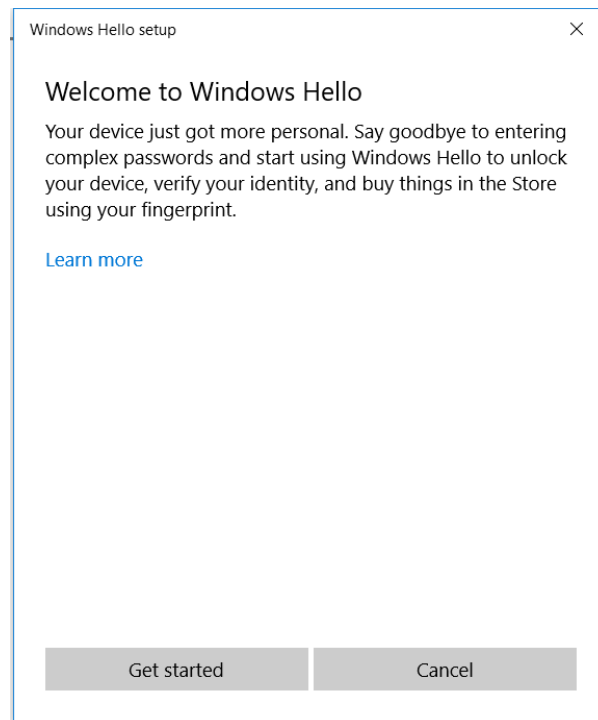

2. In the Accounts page, select “Sign-in options”.

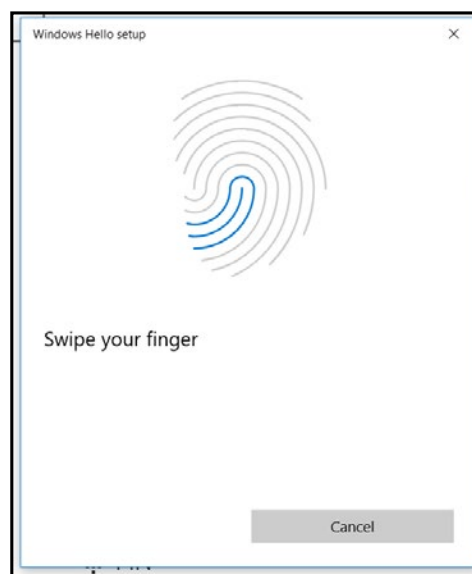

**Note:** Before setting your fingerprint sign-in option, you need to set your password first if you have not set one yet.

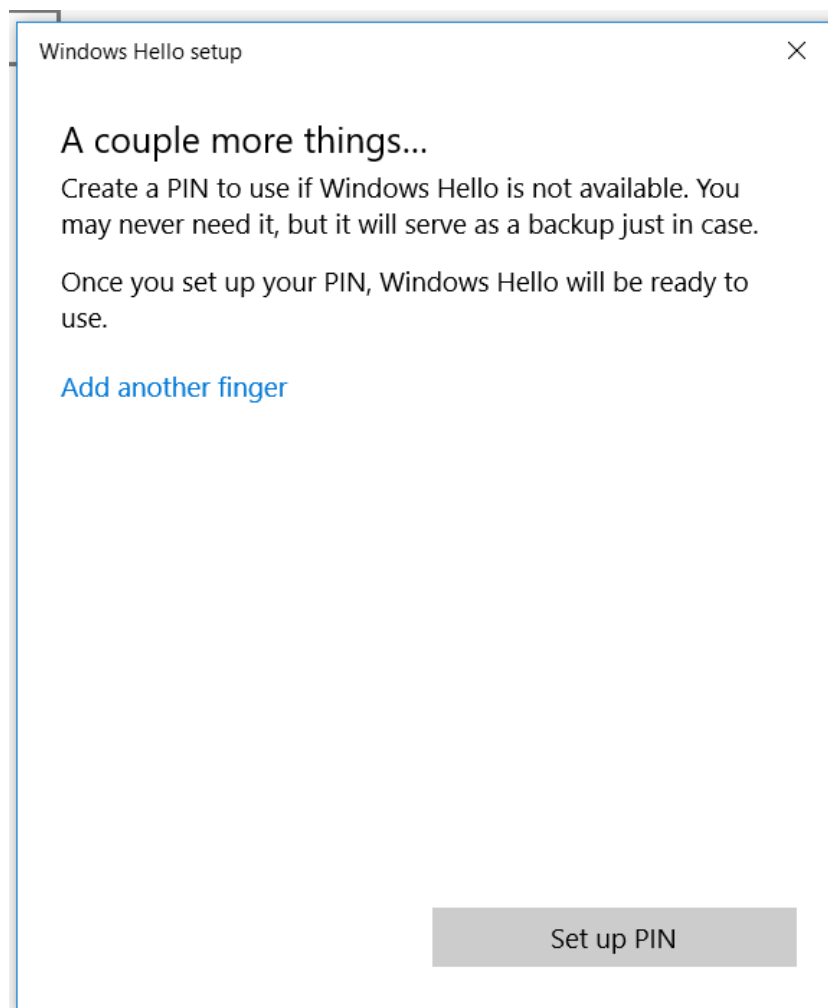

3. In the Fingerprint field, click “Setup”. This will activate a feature called Windows Hello.

4. Click “Get started” here, and the system will ask you to swipe your finger with the popup box as shown below.

The system will request you to repeat this process for several times.

Here, you may be asked to set your PIN in case that the Windows Hello becomes unavailable for some reasons.

After you follow the instructions shown on the screen, you are able to login to your laptop pc with your fingerprint.

## 3. Windows Interface

### Virtual desktops

The Desktop screen is as shown below and natively provides virtual desktop feature.

Virtual desktops gives you the ability to have multiple desktop interfaces on your laptop and to switch between them like you have multiple monitors. With this feature, you can create many desktops and respectively keep different apps open, separating types of work.

### Start With Virtual Desktops

You'll need to open the Task View to work with virtual desktops. To do this, click its button on the taskbar, which is as shown on the left.

**Note:**

1. If you don't see the button, right-click on an empty spot of the Taskbar and check the Show Task View button option.
2. You can also access Task View with the keyboard shortcut Win + Tab.

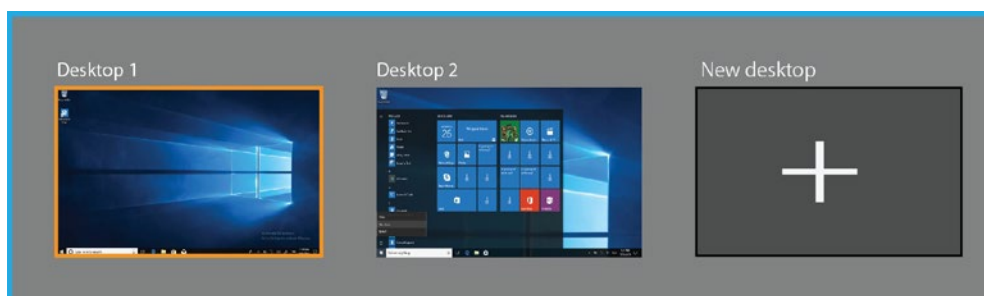

## **Creating a new desktop**

For the first time, you'll only see the view at the top of the page. The first desktop is your current one.

To create a second one, click the < New desktop > icon.

After creating a new desktop, you can simply click on the desktop you want to switch to at the top of the screen.

## Taskbar

The black bar on the bottom of the desktop is called Taskbar. It provides several key features and they are:

- Start menu
- Search box
- App shortcuts area
- Notification area

## Start menu

To open the Start menu, you can either click on the windows icon (which is also known as Start button) located at the left end of the taskbar or press once on the windows

key of the keyboard. And the Start menu will appear, as shown below

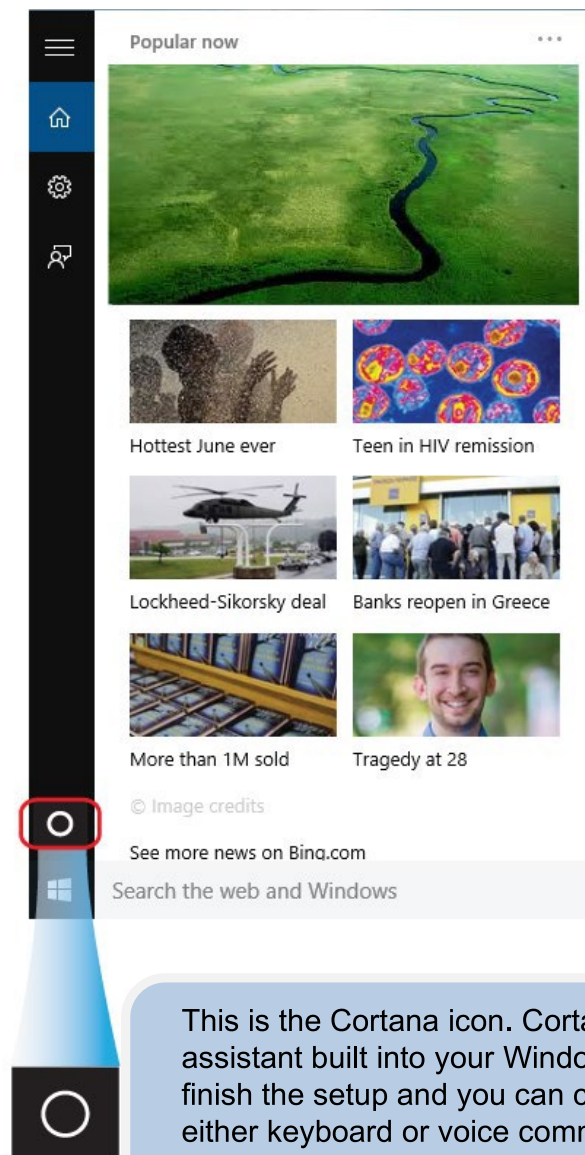

For how to setup this menu, please refer to page 30.

## Search box - Cortana

Next to the Start menu is the search box, as shown below.

When you select this box, a window will pop out as shown below.

This is the Cortana icon. Cortana is a new virtual assistant built into your Windows 10. Click here to finish the setup and you can control Cortana with either keyboard or voice commands, and use it to perform intelligent searches and more.

After you setup the Cortana settings, the search box will look like

## App shortcuts area

In this area, you can put the shortcuts of your frequently used apps. For how to arrange this area, please refer to page 30

## Notification area

The right part of the taskbar holds several icons that show you the status of your system, as shown below.

This is an area called Notification Area, where

	Click here to show more hidden status icons.
	Shows you the current battery status.(For detail, please refer to page 37)
	Shows you the status of your wireless network connection.
	Click here to show the system notifications and several shortcuts.

## 4. Setup and Connection

### Settings screen

To access to the Settings screen:

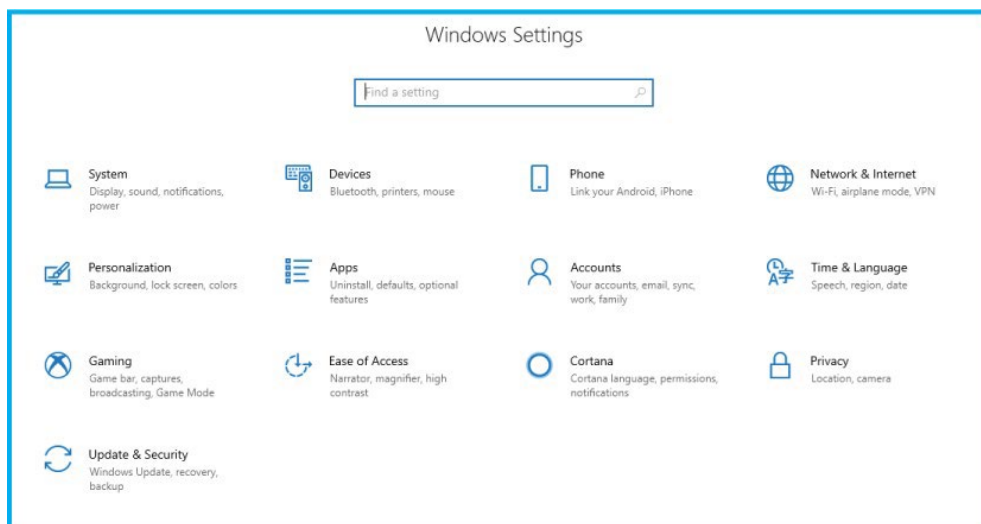

1. Click the Windows icon in the low-left corner of the Desktop. Or, press on the Windows key in the keyboard.
2. Click the Settings icon.

Step 2: click here

Step 1: click here

This will open the Settings screen, as shown below

Next, the following sections will guide you through the basic setup of your windows system.

## Windows Activation

To use all features of your Windows laptop pc, you may need to activate your Windows system. Follow the following steps to register and activate your Windows.

1. Open the Start menu and click <Settings >.
2. Click <Update & security>
3. Select <Activate>.
4. Follow the instructions to activate your windows.

## Setup Your Microsoft Account

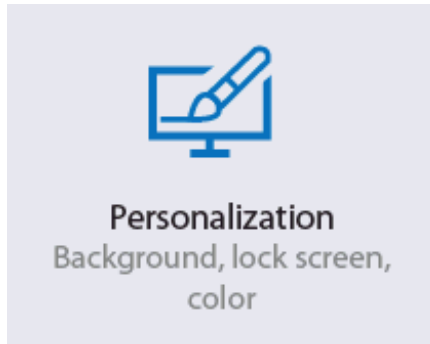

To share files or settings with other devices running Windows 10, you need to setup a Microsoft Account. Furthermore, if you want to download or purchase apps from the Microsoft Store, such Microsoft Account is required.

To setup your Microsoft account

1. Open the Settings screen and select <Accounts>.
2. Select <Your account >
3. Select <Sign in with a Microsoft account instead>.
4. Follow the instruction to register your account information.

## Replacing Desktop with Start screen

If you are more familiar with the interface similar to the Start screen introduced in Windows 8 series, you can set your system to show the Start screen instead of the Desktop every time when you power on your system.

To do so, do the following steps:

1. Open the Settings screen.
2. Select <Personalization>.
3. In the Personalization screen, enable the option <Use Start full screen>

After these steps, you will see the Start screen every time you turn on your system, as shown below.

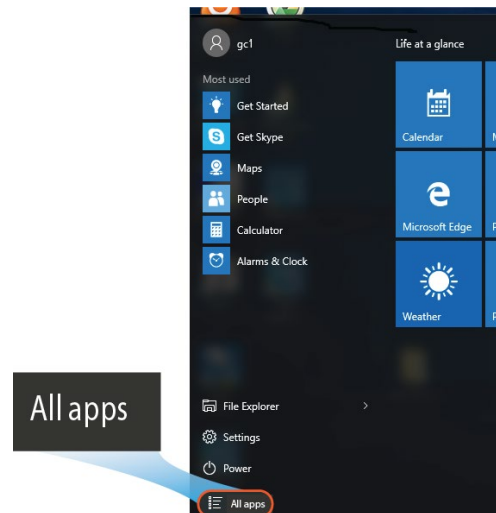

## Pin and unpin your app

### Pinning an App to Start menu or taskbar

To add an app:

1. Open the Start menu and select <All Apps>.

2. Right-click on the app that you want to appear on your Start menu or taskbar, and an option menu appears.

3. Click <Pin to Start> or <Pin to taskbar> to add the app to your Start menu or taskbar.

### Removing an App

To remove an app:

1. Right click the app that you want to remove from your Start menu or taskbar.
2. Click <Unpin from Start> or <Unpin from taskbar> to remove it from your Start menu or taskbar.

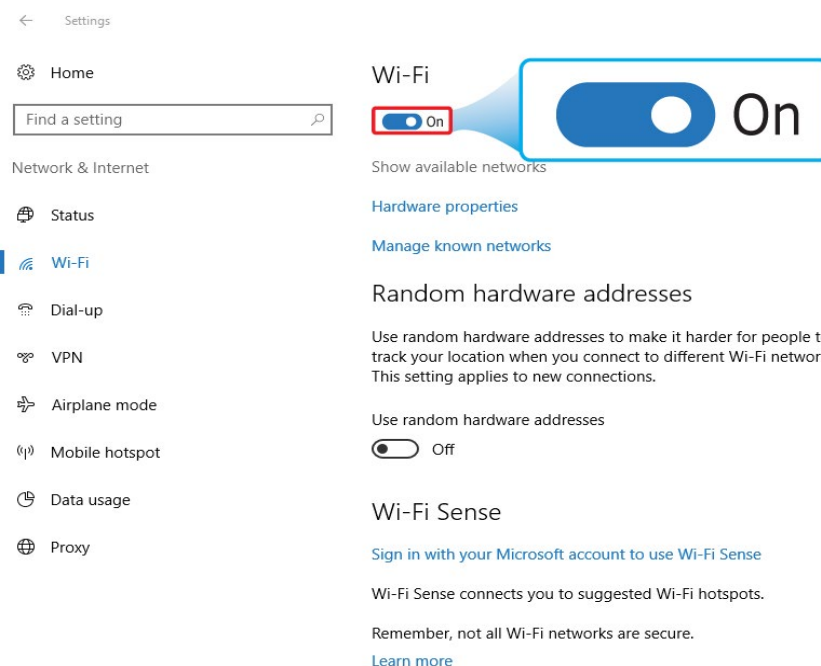

## Wireless LAN

### Enabling wireless connection

1. Open Settings menu and select <Network & Internet>.

2. Select <Wi-Fi> and set the function to ON, as shown below

3. Make sure you have switched the Airplane mode off. To confirm that Airplane mode is disabled, go to the desktop and check the notification area. If you see an airplane icon displayed on the lower right, please disable the Airplane mode first.

### Connecting to a wireless LAN

Once the wireless has been enabled, the laptop automatically

scans for available wireless networks and displays them in the wireless LAN network list. To connect to your desired wireless network, click the network's name in the list, and then click Connect.

**Note:** Some networks require a network security key or password for connection. If necessary, ask the network administrator or the Internet service provider (ISP) for the required information.

## Micro SD Card Slot

You can utilize your micro SD cards as removable disks and conveniently exchange data with digital devices such as a digital camera, digital camcorder, MP3, etc.

### To insert your micro SD card

1. Insert the micro SD card into the card slot as shown below.

2. Follow the message on the screen, and choose to open and view files.
3. A Windows Explorer runs and shows all the folders and files in the micro SD cards, and you can save, move and delete data as you are handling a storage device.

## To remove your memory card

1. Press the card and release. The card will pop up.
2. Pull the card out by holding the end of the card.

## **Connecting an External Device**

### Connecting to the USB port

Your laptop comes with USB ports compatible with USB devices.

Once you plug a USB device into a USB port on your laptop, Windows automatically loads a driver for that device. After the driver has been loaded one time, you can disconnect and reconnect the same device without performing any additional steps.

Note: If Windows requires you to install the driver before connecting, check the documentation provided by the device's manufacturer before connecting the device.

To disconnect a USB storage device, make sure you click the Safely Remove Hardware icon (as shown on the left) in the notification area of the taskbar to remove the device before disconnecting.

Note: If your USB device uses a power cord, connect the device to a power source before connecting it.

## 5. Battery

### Charging your battery

1. Plug the power cable into the adapter.

2. Plug the USB Type-C head of the adapter into the USB Type-c port, which you can find on the left side of your laptop.

3. Plug the adapter into a wall-socket.
4. The system and power indicators light in red to indicate the battery is being charged.

5. When the indicators turn into blue, the battery is fully charged.

**Note:** If the remaining power in your battery capacity is 90% or above, plugging the adapter will not fully charge your battery.

## Inspecting your battery status

### Indicators

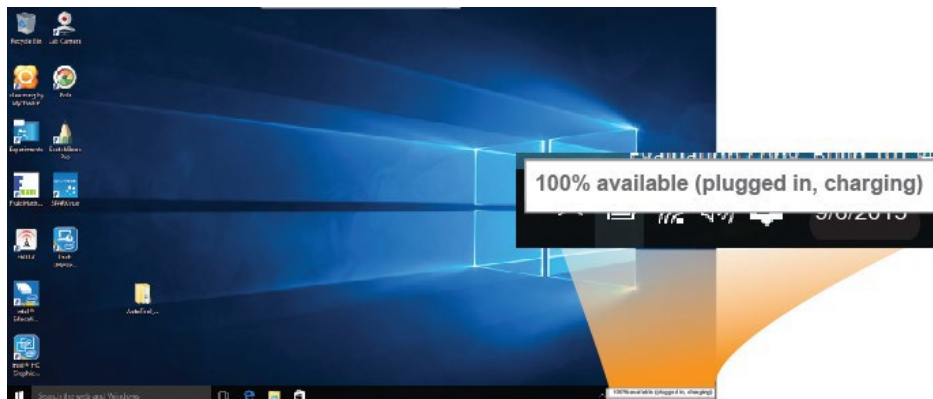

- When the power and system indicators start blinking in red, it shows the battery is in low capacity. You need to charge the battery at once.

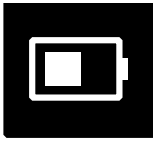

- When the battery is being charged, the indicators light in solid red.
- When the battery is fully charged, the indicators will turn into solid blue.

### Taskbar

In Desktop, move the cursor to the battery icon in the taskbar. A pop-up dialog box appears and shows you the remaining battery percentage, as shown below.

The battery icon reveals the status of your battery, which described as below.

	Battery is fully charged
	Battery is starting to drain
	Battery is about to completely drain, and you should stop using your laptop and charge it at once.
	Battery is being charged.

A battery is an expendable supply, so when using it over a long time, the capacity/battery life is shortened. If the battery life is reduced to less than half of its initial time, we recommend purchasing a new battery.

When not using the battery for a long time, store the battery after charging it to 30-40% of its capacity. This extends the battery life time.

## 6. Windows Help and Troubleshooting

### Troubleshooting

This section describes some common problems and suggested solutions, and ways to recover your laptop from a crash.

Be aware that the problems and solutions described here are meant only as a guide. They are not definitive problem solving techniques. For certain problems, you might need help from your reseller or your service provider.

When you observe a problem, stop operation immediately, because taking further action might result in data loss or damage. Take a note of what the system is doing and what actions you performed before the problem occurred. Provide detailed information to your service provider for quicker problem resolution.

For about any problem, follow these steps:

1. Restart your system.
2. Check your Wi-Fi connection.
3. Reset your Wi-Fi connection.
4. Plug your system to a wall socket to charge it for at least one hour.

Screen problems	
When I turn on the laptop, nothing appears on the screen.	<ul style="list-style-type: none"> <li>• If the screen is blank, make sure that:               <ul style="list-style-type: none"> <li>- The AC adapter is connected to the laptop and the power cord is plugged into a working electrical outlet.</li> <li>- The laptop power is on. (Press the power button 6 seconds to force the power off, and power it on again.)</li> </ul> </li> <li>• If these items are properly set, and the screen remains blank, have the laptop serviced.</li> </ul>
My screen goes blank while the laptop is on.	<ul style="list-style-type: none"> <li>• Your system is in its sleep mode. Do one of the following to resume from sleep mode:               <ul style="list-style-type: none"> <li>- Press any key on the keyboard for 2 to 3 seconds.</li> <li>- Press the power button.</li> <li>- Press the windows key button if any keyboard attached.</li> </ul> </li> </ul>
Sleep problems	
The critical low-battery error message appears, and the laptop turns off	<ul style="list-style-type: none"> <li>• The battery power is getting low. Connect the AC adapter to the laptop.</li> </ul>

The laptop enters sleep mode immediately after Power-on.	<ul style="list-style-type: none"> <li>• Make sure that the battery is charged.</li> <li>- The operating temperature may be too hot. Move to a cooler environment and try to wake the laptop.</li> </ul>
The laptop does not return from sleep mode and the laptop does not work.	<ul style="list-style-type: none"> <li>• If your laptop is in sleep mode, connect the AC adapter to the laptop, then press the key button or the power button.</li> <li>• If your laptop is powered-off, connect the AC adapter to the laptop, then press the power button to resume operation.</li> </ul>
Display problem	
The screen is blank.	<ul style="list-style-type: none"> <li>• Do the following: <ul style="list-style-type: none"> <li>- Charging your system and press the F7 function key to make the screen brighter.</li> <li>- Press the power button to resume from sleep mode.</li> <li>- If the problem persists, follow the solution in the next problem</li> </ul> </li> </ul>
Incorrect characters appear on the screen.	<ul style="list-style-type: none"> <li>• Are the operating system or programs installed correctly? If they are installed and configured correctly, have the laptop serviced.</li> </ul>
Sound problems	
No sound can be heard from the speaker even when the volume is turned up.	<ul style="list-style-type: none"> <li>• Make sure that: <ul style="list-style-type: none"> <li>- The mute function is off.</li> <li>- The combo audio jack is not being used.</li> <li>- Speakers are selected as the playback device.</li> </ul> </li> </ul>

Other problems	
Your laptop does not respond.	<ul style="list-style-type: none"> <li>• To turn off your laptop, press and hold the power button for 6 seconds or more. If the laptop still does not respond, remove the AC adapter.</li> <li>• Your laptop might lock when it enters sleep mode during a communication operation. Disable the sleep timer when you are working on the network.</li> </ul>
The connected external device does not work.	<ul style="list-style-type: none"> <li>• Do not connect or disconnect any external device cables other than USB while the laptop power is on. Otherwise, you might damage your laptop.</li> <li>• When using a high power consumption external device such as an external USB optical disk drive, use an external device power adapter. Otherwise, the device may not be recognized.</li> </ul>
